PROFESSIONAL PROFILE

Data Science student (9.5/10 GPA) with a problem-solver mindset and high initiative. I am passionate about using machine learning to transform raw data into scalable solutions that solve real-world problems. I have built a strong technical foundation in Python, SQL, and ML, demonstrated through **60+ university projects** and **winning the 1st Place Innovation Award at the Hack4Edu hackathon**. Seeking to apply my proactivity and analytical skills to high-impact challenges.

TECHNICAL SKILLS

- **Languages & Core:** Python (Pandas, NumPy, Scikit-learn), SQL (Complex queries, Window Functions), R (Tidyverse), Bash/Shell.
 - **Data & Cloud:** Google Cloud Platform (BigQuery, Vertex AI), AWS, Git/GitHub, ETL Pipelines.
 - **Visualization:** PowerBI (DAX), Tableau, Matplotlib, Seaborn.
 - **Concepts:** Machine Learning (Regression, Classification, Clustering), Statistical Analysis, A/B Testing, Algorithms & Data Structures.
-

KEY TECHNICAL PROJECTS

AI-Powered Study Platform | 1st Place Winner, Hack4Edu 2025 (Global Hackathon)

- Secured 1st Place Innovation Award by leading the development of a scalable educational platform aimed at reducing dropout rates.
- Architected a personalized recommendation engine using Python (Streamlit) and OpenAI API (GPT-4o) to generate tailored study paths and summarize complex content for students.
- Coordinated a cross-functional team of 4, implementing Git workflows for version control and deploying the MVP using Streamlit Cloud for real-time access.

Neoveo - NEO Visualization Tool | NASA International Space Apps Challenge 2025

- Developed a solution for the Planetary Defense challenge in under 48 hours, collaborating in a high-pressure environment to visualize asteroid data.
- Processed Near-Earth Object (NEO) telemetry data from NASA's NeoWs API using Python (Pandas) to classify objects by hazard level and approach date.
- Engineered an interactive Streamlit dashboard that visualized orbital trajectories, demonstrating rapid prototyping skills and effective data storytelling.

Predictive Analysis of Frailty in Elderly Patients | Academic Research Project

- Achieved 95% sensitivity in mortality risk detection by engineering a KNN and K-Means pipeline on a highly imbalanced medical dataset.
 - Optimized model recall using SMOTE techniques and cross-validation to prevent overfitting, ensuring reliable diagnosis suggestions for medical staff.
-

EDUCATION & ACHIEVEMENTS

B.S. in Data Science | Universidad Internacional de la Rioja (UNIR) | 2023 - 2027

- **GPA: 9.5/10** (with 6 High Honors courses as Advanced Programming and Optimization I).
- **Community Lead:** Selected as Administrator for the official Data Science student server. Manage resources for 250+ students and organize peer-mentoring sessions to support undergraduates.

Professional Certifications

- Google Data Analytics Professional Certificate
 - IBM PowerBI SkillsBuild Certificate
-

ADDITIONAL EXPERIENCE

Housekeeper (Summer Work and Travel Program) | Columbia Hospitality, WA, USA | 2023 - 2024

- Demonstrated high adaptability, proactivity, and cross-cultural communication skills in a demanding, English-speaking environment.
-

LANGUAGES & ADDITIONAL INFORMATION

- **Languages:** Spanish (Native), **English (C1 - Advanced)**, French (B1 - Intermediate) | Driver's license
